Abstract not available for JP2002515414T

Abstract of corresponding document: **WO9959540**

The present invention discloses a topical antimicrobial composition containing high surface area zinc oxide powder, said powder having a surface area between 30 m²/g and 100 m²/g and a particle size between 0.1 and 200 μm in diameter. The antimicrobial properties of the compositions make them suitable for treating acne, athletes foot, nappy rash and dandruff.
